Android Env

Android Simulator

- open the simulator/get the real devices information
- check device : adb devices
- we can get the local.properties file (jerkins server)
- config in appium

  {
  "deviceName": "emulator-5554",
  "sessionOverride": true,
  "platformName": "Android",
  "app": "/   p.apk"
  }
- config in local.properties

  #for android - simulator
  appium.platformName=Android
  appium.app=S   l.apk
  appium.automationName=UiAutomator2
  appium.appPackage=   v
  appium.platformVersion=8.0
  appium.deviceName=emulator-5554
  #for android - real devices
  appium.deviceName=name_device
